I am a self-taught, creative full-stack developer. I have extensive experience in building visually appealing and user-friendly web applications using React.js. My skills and tools include React.js, Node.js, HTML, CSS, MongoDB and GitHub. I have a proven track record of successfully working on various projects and libraries related to React.js and web API integration. I am constantly seeking opportunities to enhance my skills and deliver high-quality results.

WORK EXPERIENCE

Software Developer Intern Marvio360

04/2022 - 10/2022

Pune, Maharashtra

Achievements/Tasks

- Streamlining the online booking process to ensure it is both easy and efficient for customers.
- Implementing a responsive design approach, ensuring the website functions seamlessly across various screen dimensions and devices while maintaining optimal functionality.
- Developing multiple informative pages within the website to provide users with a comprehensive understanding of its offerings and features.
- Crafting custom components to elevate the overall user experience, thus contributing to the website's usability and engagement

React Developer TurnsApp INC.

12/2022 - Present

Noida

Driver Route, Turns Marketing & Business Manager

- Developed geofenced functionality to facilitate route creation, catering to the needs of laundromat business owners and their drivers.
- Implemented automatic driver assignment feature to streamline operations.
- Utilized the Google Maps API to enable efficient area selection during route planning.
- Integrated auto-optimization capabilities to enhance route efficiency, particularly for routes with multiple stops.
- Ensured user-centric design principles were applied throughout feature development to provide an intuitive and seamless user experience.
- Implemented multi-role authentication system for enhanced security.
- Successfully integrated the US-based company "PayRange" into our system, enhancing various features including machine management and PayRange statistics.
- Designed and implemented a Refresh Token mechanism to ensure a seamless experience for laundromat business owners.
- Developed a comprehensive marketing software solution for targeted communication, including email and text messaging, based on user segments.
- Integrated a robust business manager functionality, encompassing reporting, order creation, and more, to streamline operations and enhance user experience.

PERSONAL PROJECTS

Journey (09/2022 - 10/2022)

- I have developed a full-stack MERN web application that combines the power of React.js, React-Router-DOM, Redux, Material UI, JSON Web Tokens (JWT), Google Authentication, MongoDB, Multer, Express, and Node.js.
- The web app allows users to share their journeys by creating, liking, updating, commenting on, and deleting posts. They can create an account either through Google authentication or by providing their personal details.
- With this app, users can connect, share experiences, and grow their community.

Streaming App (05/2022 - 06/2022)

- I have developed a streaming application, similar to Amazon Prime, that leverages the power of the TMDB API to fetch movie information and the YouTube API to play trailers on a React Player.
- The app features a sleek design, incorporating Tailwind and Material UI, and uses Firebase for data storage. Context API is utilized for efficient state management. This complete streaming app allows users to watch movies and save their favorites.
